

Worm Castings & Worm Juice

Compost Worms produce a safe, organic alternative to expensive chemical fertilisers.

Will not burn the most sensitive plants and being full of richness only needs to be used sparingly.

Tests have shown that Worm Castings contain approximately :

Five times more available	NITROGEN
Seven times more available	PHOSPHOROUS
Three times more available	POTASSIUM
One & a half times more available	CALCIUM

THAN ORDINARY TOP SOIL

Worm Castings

Promotes strong root growth Odour free Better water penetration Improved soil stability.

Recommended feeding :

Sprinkle 1-2 teaspoons around your plants every 2 weeks and water well.

For larger areas apply 250 litres per hectare during the Autumn.

Potting & Transplanting :

Add 5 -10% castings to either sand, pumice or potting soil and water well.

Worm Juice

Use this rich liquid fertiliser on all your indoor & outdoor plants.

50mls to 1 litre water.

For larger areas apply 5 litres Worm Juice Concentrate per hectare, during in the Spring.

Worm Juice contains :

NITRATE - PHOSPHORUS - POTASSIUM - MAGNESIUM - CALCIUM - IRON-
MANGANESE - ZINC - BORON - COPPER - SULPHUR - SODIUM
